# Profile

Hormigón Express is founded on January 1st, 2000 by engineers Alfredo Fonseca Mora and Roberto Zauner, inaugurating its first plant in the Province of Colón.

Later, in 2003, due to the construction boom, demand for concrete shoots up and its expansion begins by opening a plant in the province of Panamá.

In 2004, Hormigón Express opens its first mobile plant, providing exclusivity to its clients for their large-scale projects on site.

Since its inception, the commitment of Hormigón Express is to provide an efficient service, with quality products through innovation and continuous improvement.

## Quality Control

Our commitment to quality and responsible management of operations leads us to have our own laboratories and a prepared workforce; governed by rules and ACI and ASTM international standards, supported by strict metrological control of measuring instruments and devices, we guarantee the reliability of the processes and the validity of the results.

We provide personalized technical support to our clients, in order to satisfy the requirements of each of their projects.

# Our Certifications

Hormigón Express has International Trinorma certification granted by SGS Panama Control Services Inc., through an integrated policy based on the standards ISO 9001, ISO 14001 and OHSAS 18001, we ratify the efficiency and quality of our processes and services, in addition to supporting the commitment to the environment and our staff.

We are also certified by the Concrete Sustainability Council (CSC), the organization governing the responsible sourcing of concrete.

## Quality Management System ISO 9001:2015

Our customers are assured that our products will comply with the requirements for which they were designed, since applying this standard achieves excellent quality control. This has a favorable impact on customer satisfaction and gives us the ability to provide products and services of maximum quality.

## Environmental Management System ISO 14001:2015

As a responsible company, Hormigón Express is committed to a better management of environmental risks, reducing the environmental impact resulting from our activities and ensuring the sustainability of our production. We carry out the necessary activities to reduce the environmental impact of our work through operational controls derived from the identification of aspects and evaluation of our processes.

## Health and Work Safety Management System OHSAS 18001:2007

We comply with the established requirements regarding health and safety in the workplace. Through operational controls, hazards are identified and risk assessments are carried out. Our Human Resources has the preparation and guidance of established processes to mitigate risks, manage emergencies, and prevent incidents and accidents.

As part of the continuous improvement cycle, we promote improvements in working conditions and well-being of our employees.

## Concrete Sustainability Council (CSC)

We are certified by the Concrete Sustainability Council (CSC), this Global Responsible Sourcing Certification for Concrete encompasses, beyond permits and strictly legal compliance, activities and mechanisms that concrete producing companies must comply with to promote sustainability in their operations. It is important to us to apply responsible practices throughout the supply chain; verifying, proactively and reactively, that our commercial activities do not contribute to conflicts and adverse environmental and social impacts.
